

CONVERTED, PROCESSED AND MACHINED PARTS

We have extensive in-house processing facilities and are able to offer most of our materials in the finished format required. This includes shaped parts, machined parts, cut and stripped cable, cut sleeving, slitting to width, adhesive tape conversions, and many other individual processes.

We have a full CAD/CAM facility to enable fast turn-round and, due to our flexibility, we can supply competitively in small and large quantities.
